Personal Profile

I am a seasoned GCP data engineer with over 2.6 years of experience in designing, implementing, and maintaining data pipelines and platforms.I possess a strong understanding of data modeling concepts, and am skilled in designing and implementing data architectures that support complex business requirements.Throughout my career, I have demonstrated a strong ability to collaborate with cross-functional teams, and have effectively communicated technical concepts to non-technical stakeholders. I am dedicated to delivering high-quality data solutions that align with business objectives.

Education

- **California State University, Eastbay** — Hayward, CA
  Master of Science in Statistics and Datascience — *August 2022 - Current*

- **Vignan's Institute of Information Technology** — Visakhapatnam, India
  Bachelor of Technology in Electronics and computer Engineering — *July 2015 - April 2019*

Skills Summary

- **Languages**: Python, SQL, Bash, C++, Embedded C
- **Frameworks**: Data Build Tool, Flask, pyspark, kafka, Hadoop, Pubsub, Django
- **Tools**: Docker, GIT, PostgreSQL, MySQL, SQLite, Apache Airflow
- **Platforms**: GCP, AWS, Linux, Windows, Arduino, Raspberry
- **Reporting Tools**: Google Data Studio,Tableu, PowerBI, Cognos
- **Soft Skills**: Leadership, Event Management, Writing, Public Speaking

Experience

- **Infosys Limited - Loreal USA** — Hybrid
  Data Engineer (Full-time) — *Feb 2020 - July 2022*
  - **Responsibilities**: To enable multigrain insights on e-retail sales and ads running on amazon portal
  - **Technologies and frameworks**: Google Cloud Platform, Python and SQL
  - **Goals Achieved**:
    - Built High scalable 4 layer architecture(raw, curated, semantic & Consumption) to handle huge workloads effectively
    - Developed and maintained data pipelines and analytics solutions on GCP.
    - Created data models and implement automated data validation checks to ensure data quality.
    - Worked with SQL and NoSQL databases to query and analyze data.
    - Achieved metadata driven composer(Airflow) data pipelines to orchestrate data pipelines to perform ETL operations.
    - Created automated scripts controlled by GCP cloud functions to monitor daily file loading improving efficiency and reducing processing time by 60%
    - Worked with business stakeholders to identify and understand data requirements, and created data models to support business needs.
- **Glean Solutions** — Remote
  Firmware Developer (Freelancer) — *Nov 2018 - Jan 2020*
  - **Responsibilities**: Building of smart home automation devices based on data from real-time sensors and user controlling
  - **Technologies and frameworks**: Raspibian, Home Assistant, Embedded C, Arduino, Python and SQL
  - **Goals Achieved**:
    - Designed, developed, and maintained firmware for home automation devices, including smart locks, thermostats, and security systems.
    - Worked with wireless communication protocols such as Wi-Fi, Zigbee, and Bluetooth, to ensure seamless connectivity between devices and mobile applications.
    - Implemented firmware updates and bug fixes, and conducted thorough testing and validation to ensure high quality and reliability of the firmware.
    - Worked with hardware engineers to develop custom PCBs for smart lighting systems, optimizing performance and reducing costs.
    - Designed and developed firmware for smart home lighting systems, including drivers for various lighting components and integration with voice assistants such as Amazon Alexa and Google Home.

Projects

- **CNN based body rash prediction application with AR technology**: (Work in progress) Research oriented, open source Body rash prediction application to detect and predict type of rash upon scanning the image. It gives us high level analysis and suggests necessary precautions to take before consulting a medical practitioner which saves 50% time and money. Tech: Python, opencv,TensorFlow,keras.
- **Cloud based Serverless ETl architecture**: (Work in progress) Severless model gives us high flexibility in scaling and maintaining workload by reducing 60% overall cost for an ETL/ELT data pipelines. With this opensource architecture, one can deploy on any cloud with their respective services with ease and comfort. Tech: Python, GCP cloud, AWS cloud, DBT, FLASK, docker
- **Raspberry Pi controlled Home automation**: Retrofitted smart devices enables you to monitor and control your home appliances from anywhere in the world. With this technology, we can reduce 40% of the energy consumption and configure daily routines according to our lifestyle to make life easy. Tech: Embedded Python, Embedded C, sensor networks,pubsub, I2C communication, Networking (September '18)
- **Amphibot- An underwater surveillance robot with object detection**: Amphibot is a smart amphibian robot powered with high end computing system to detect objects and collect samples. This AI based robot can be used at the places where humans are not able to reach. Tech: Raspberry, Arduino, Python, Embedded C, tensorflow, opencv, BLE, sensor network

Honors and Awards

- Awarded with RISE GRACIAS- RISING STAR at INFOSYS LTD for exceptional performance in project deliverable.
- Got a certificate in national level technical event "BAJAJ ELECTRICAL HACKATHON" in IIT BOMBAY in 2018.
- Got 1st Prize in Project Expo in VISAKHA UTSAV in 2017.
- Got 1st Prize in HAND SOLDERING COMPETITON conducted by VIIT in 2017.
- Got First prize in District level Science Fair Competition in 2010.

Volunteer Experience

- **President at Student Activity Council - VIIT** — Visakhapatnam, India
  Responsibility for leading the council and guiding its members to achieve their goals — *July 2017 - April 2019*
- **Student co-ordinator for IoT Research Lab** — Visakhapatnam, India
  Conducted workshops on Internet of Things and designing smart devices — *July 2017 - April 2019*
